This has handles.
It’s also a data center.

A firewall, a private cloud and threat detection, built in a 3D-printed rack from old and refurbished hardware.

The rack as built today: 3D-printed chassis, fanless firewall, KVM, switches and Pis

WHY IT MATTERS

Every workplace runs on machines like these

A hospital, a bank, a game studio: every one of them is a target. Here you learn it with your hands.

You plug the cables

Build the network zone by zone, from the firewall to the last switch port.

You write the firewall rules

Decide what gets in, what stays out, and what sets off an alert.

You break it, then fix it

Pull a drive, cut the power, launch the scan, and bring it all back.

LIVE DEMO · 1:20–2:20

Watch the firewall catch a scan

The attacker

A lab laptop on the LAN scans the network

The firewall

Suricata IDS watches every packet

The alert

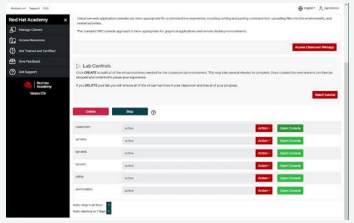

Who, what and when, in seconds

Simulated attack inside an isolated lab · lab-owned devices only

FROM DAY ONE · 2:20–3:15

Log in where the industry trains

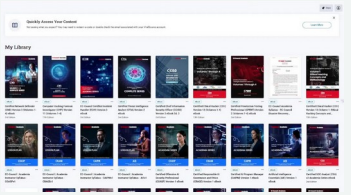

Red Hat Academy

Live RHEL classrooms, built on demand

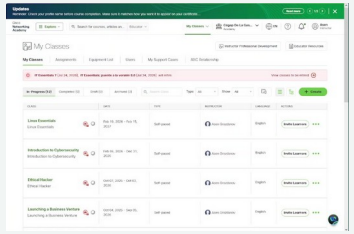

EC-Council iLabs

Hands-on hacking and forensics labs

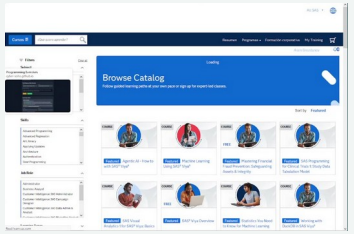

EC-Council Academia

CEH, CHFI, CND, CPENT courseware

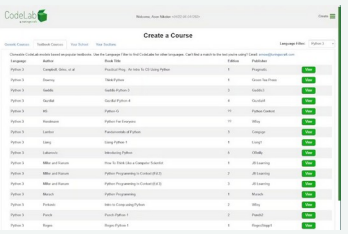

Cisco Networking Academy

Linux, cybersecurity, ethical hacking

SAS

Analytics, machine learning and AI

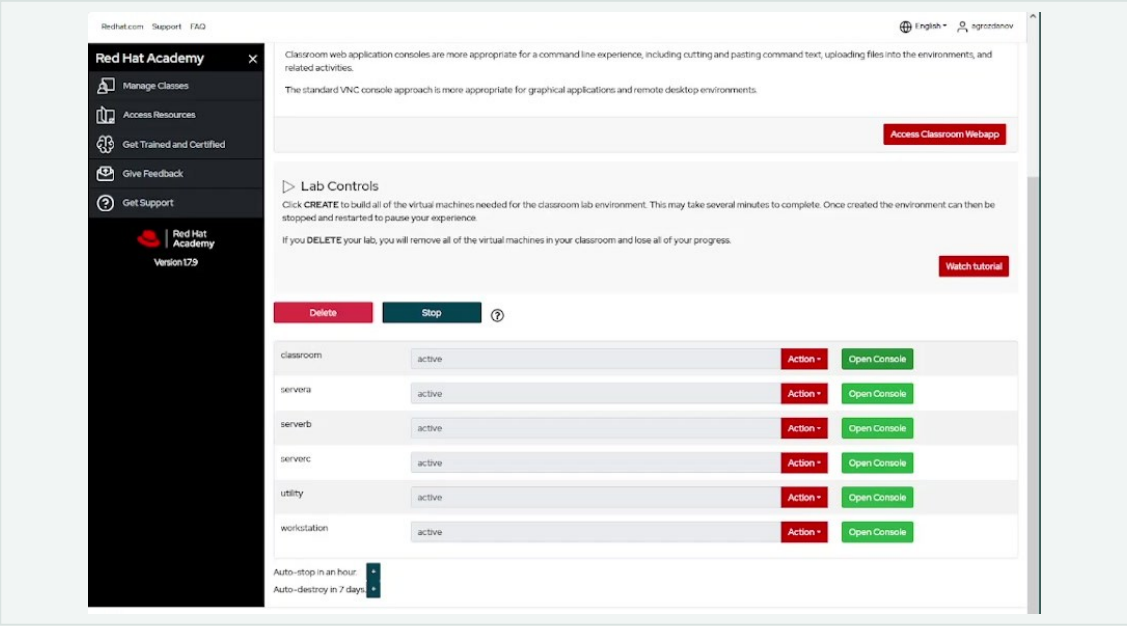

CodeLab

Programming practice, textbook by textbook

© 2026 | From the Industry to the Classroom — Building the Next Generation of IT Pros. ALL Rights Reserverd.

A classroom of live Linux servers

Red Hat Academy: a classroom of live virtual machines

Red Hat Enterprise Linux 10 console in the browser

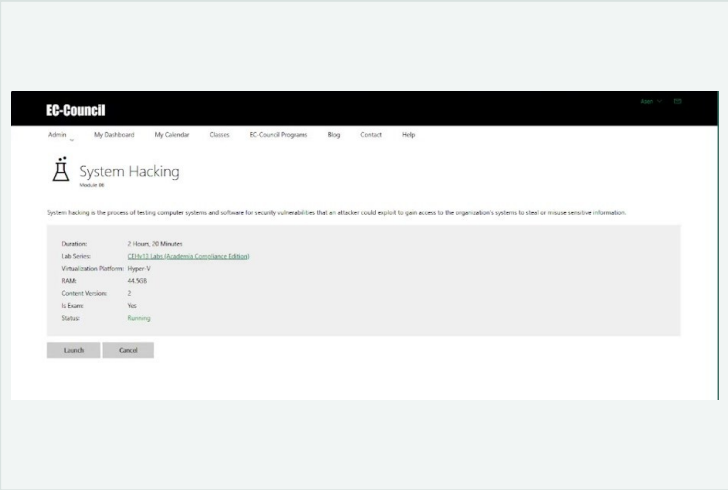

Say: *"This is IBM's Red Hat, the platform the industry uses to prepare for the most recognised Linux certifications. Every student gets a whole classroom of servers, live, online."*

Say: *"No install, no setup. You open a browser and you are root on Red Hat Enterprise Linux 10. Learn it for the knowledge, or go all the way to the exam."*

© 2026 | From the Industry to the Classroom — Building the Next Generation of IT Pros. ALL Rights Reserverd.

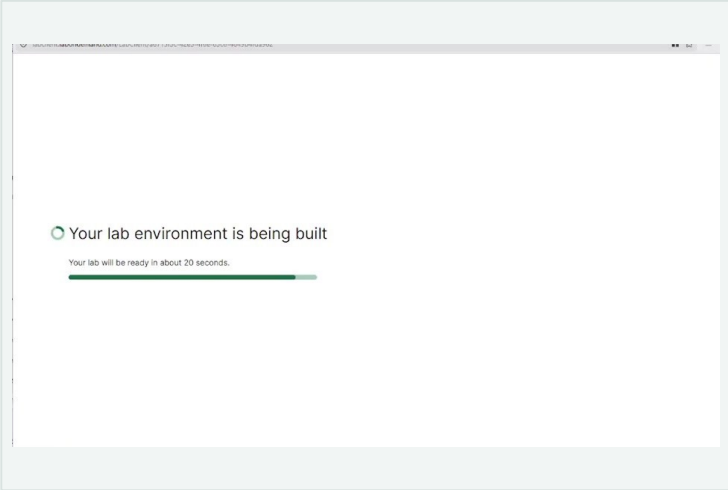

PLATFORM · EC-COUNCIL iLABS

Hack it legally, then learn to stop it

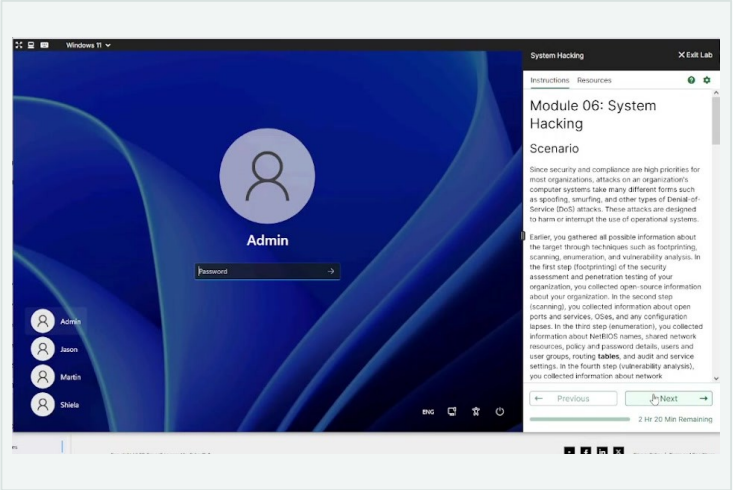

EC-Council iLabs: System Hacking lab ready to launch

Say: *"This is EC-Council, the people behind Certified Ethical Hacker. This is one of their labs: System Hacking."*

One click: the lab is built in about 20 seconds

Say: *"Watch: one click, and they build you the whole lab while I talk. About 20 seconds."*

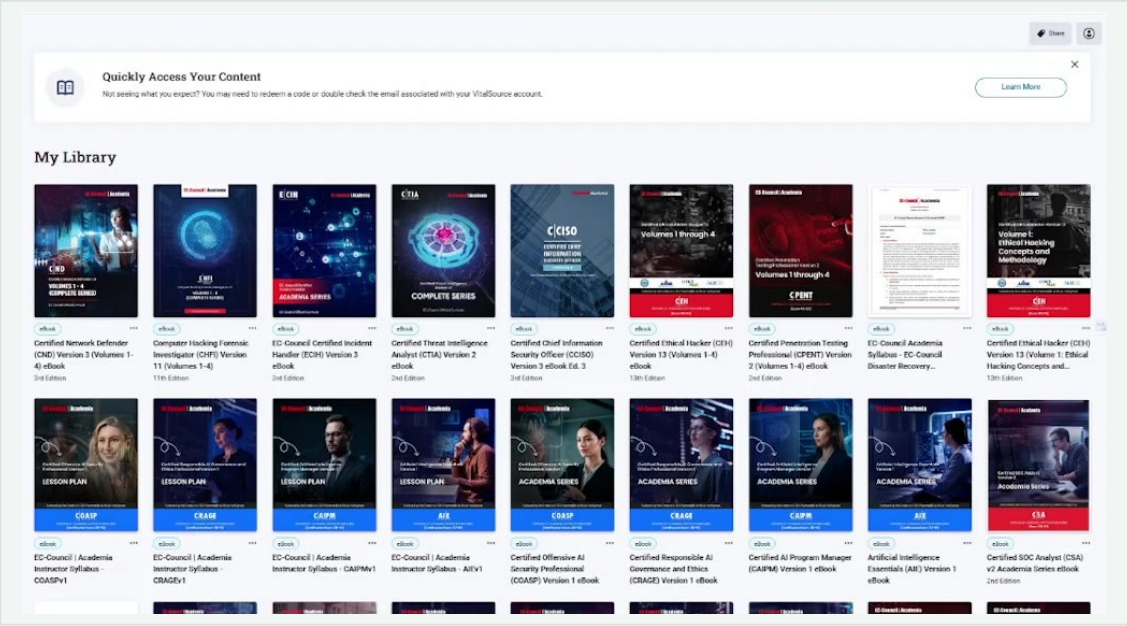

Windows 11 machine beside the System Hacking steps

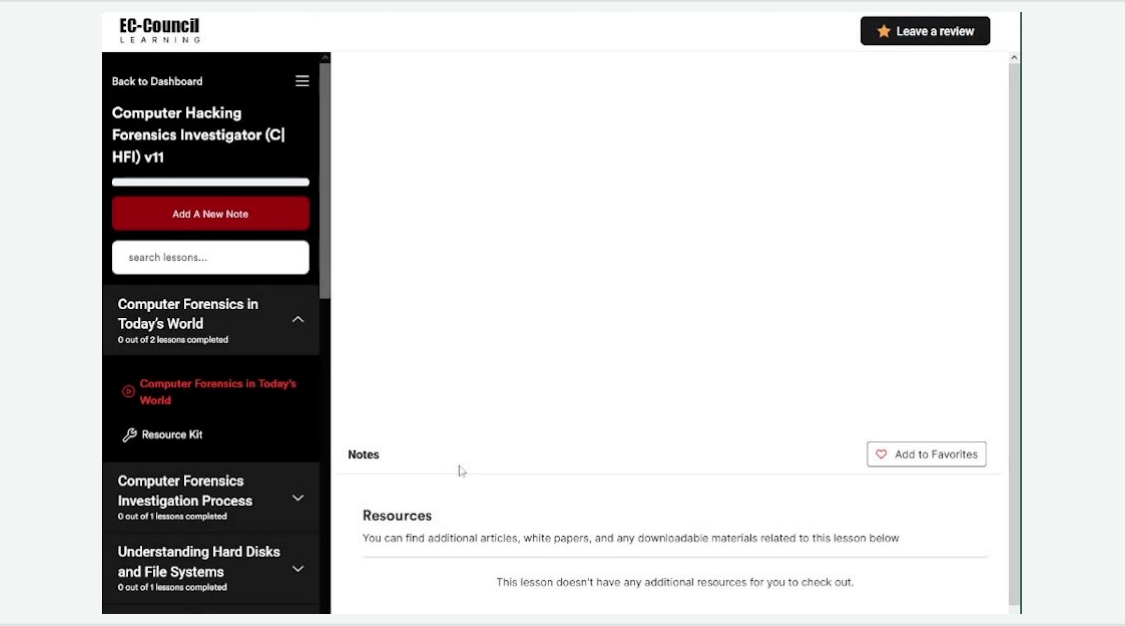

Say: *"Real virtual machines on the left, step-by-step instructions on the right. You practise the attack legally, then learn to stop it."*

© 2026 | From the Industry to the Classroom — Building the Next Generation of IT Pros. ALL Rights Reserverd.

The library behind the labs

EC-Council Academia library: CND, CHFI, ECIH, CTIA, CCISO, CEH, CPENT and more

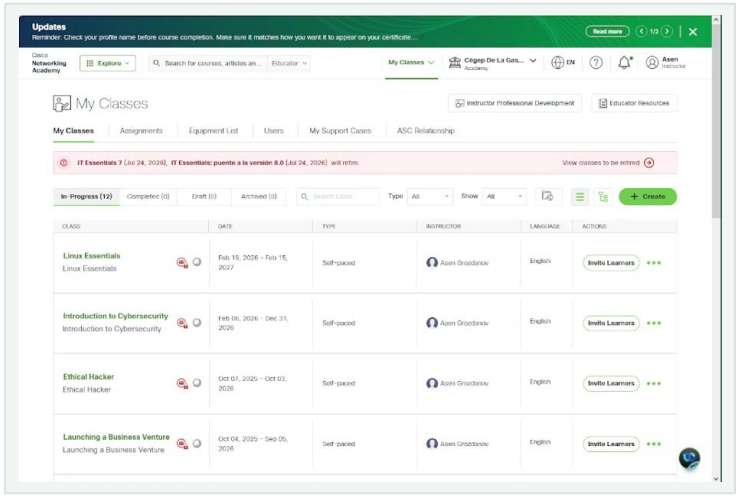

EC-Council Learning: Computer Hacking Forensics Investigator (CHFI) v11

Say: *"Behind the labs, the full library: ethical hacking, forensics, incident handling, threat intelligence. The same books certification candidates study."*

Say: *"Want to be the person who investigates after the breach? Computer Hacking Forensics Investigator is in there too."*

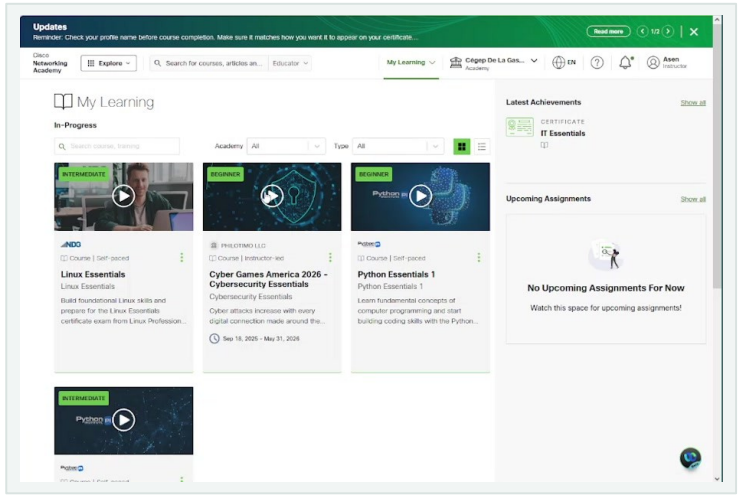

© 2026 | From the Industry to the Classroom — Building the Next Generation of IT Pros. ALL Rights Reserverd.

Networking from the provider the world runs on

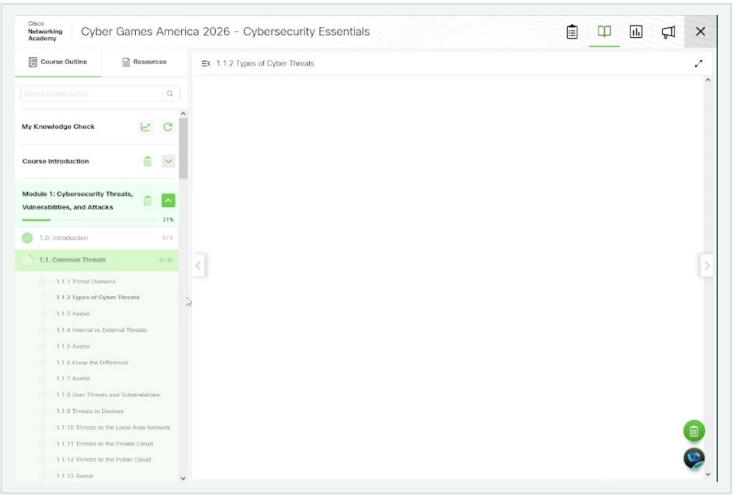

Classes running now: Linux Essentials, Introduction to Cybersecurity, Ethical Hacker

Say: *"Cisco is the networking provider the world runs on. These classes run right now, and your professors are trained to teach them."*

Python Essentials, Cyber Games 2026 and an IT Essentials certificate

Say: *"Courses lead to Cisco certificates you can show an employer, like this IT Essentials one."*

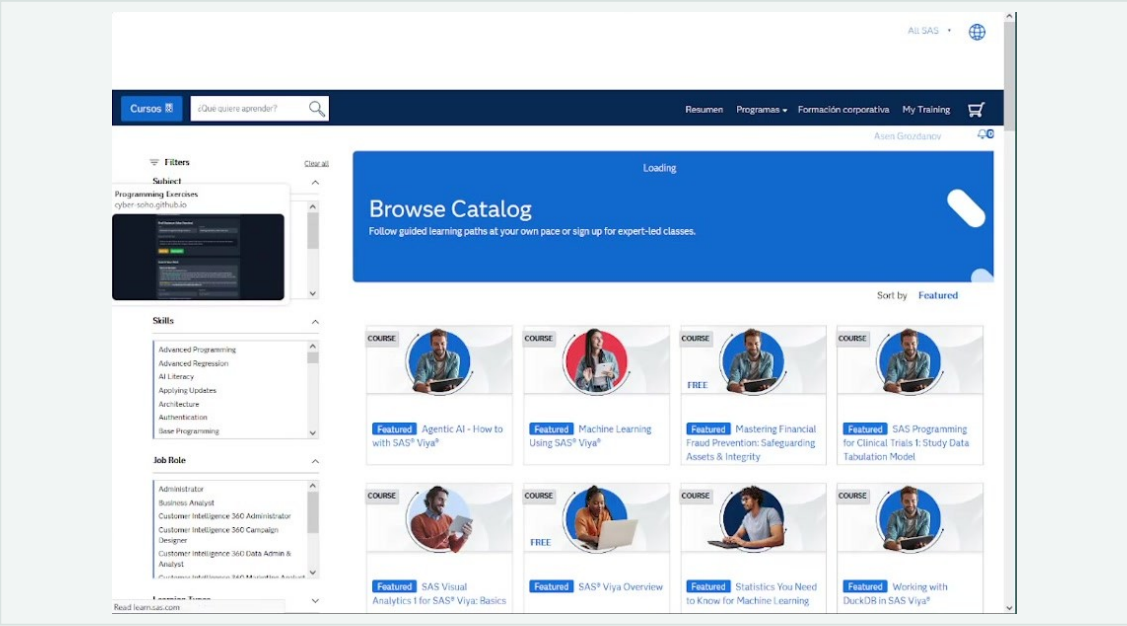

Cyber Games America 2026: Module 1, threats, vulnerabilities and attacks

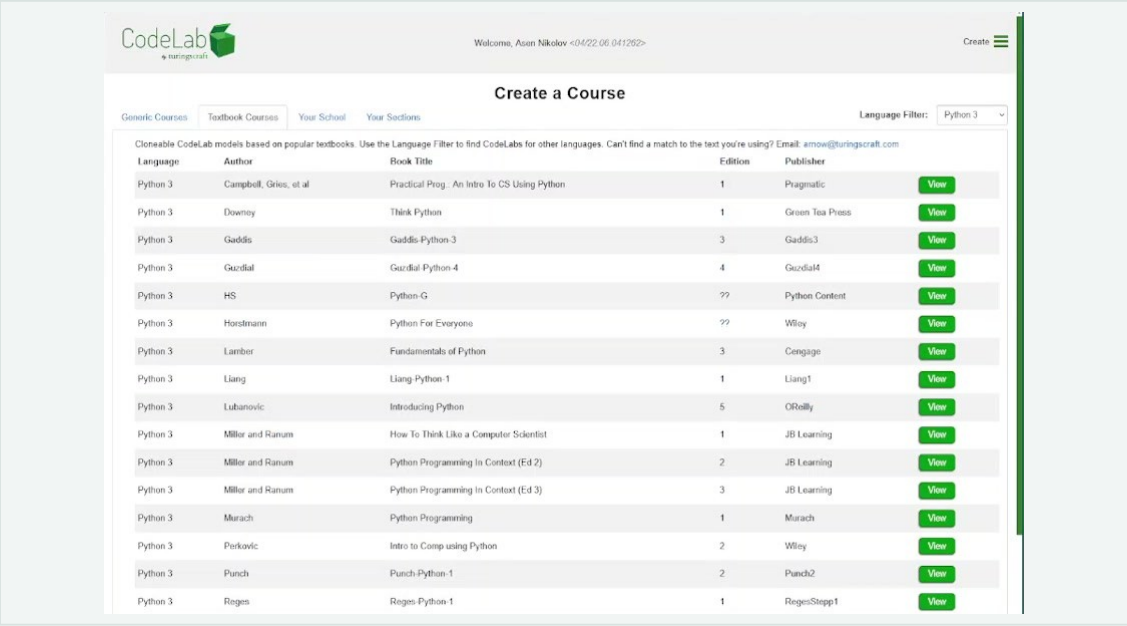

Say: *"It's not only courses. This is a cybersecurity competition: the same threats our firewall just caught."*

© 2026 | From the Industry to the Classroom — Building the Next Generation of IT Pros. ALL Rights Reserverd.

Data, AI and code, with instant feedback

SAS Training: analytics, machine learning and AI courses

CodeLab: Python practice mapped to textbooks

Say: *"Data science, AI and machine learning are where the jobs are going. SAS gives us the courses and the online tools to work on real data."*

Say: *"Learning to code? CodeLab follows your textbook exercise by exercise and tells you straight away whether your answer is right."*

THE PLAN · 3:15–3:50

From a firewall to a private AI lab

TODAY

Firewall and switches

Network zones, security Pis, the 3D-printed rack

THIS TERM

Storage server

Four drives in RAID 5 that survive a dead disk

JANUARY

Private cloud

Two 64 GB hosts, a SIEM and battery backup

2027 · YOUR PROJECT

Local AI node

Git, coding tools and a Qwen model that runs right here

Built with an AI co-pilot. A Claude Max 20x subscription supports the build through December 2027: lab guides, infrastructure code and documentation.

Planned build, subject to funding

€10,721.50 for the life of the project

IVA included · October 2026 to December 2027 · three tranches

Phase 1 · Oct–Dec 2026

€4,162.90

Showcase, security, NAS storage, gear reimbursement

Phase 2 · Jan–Mar 2027

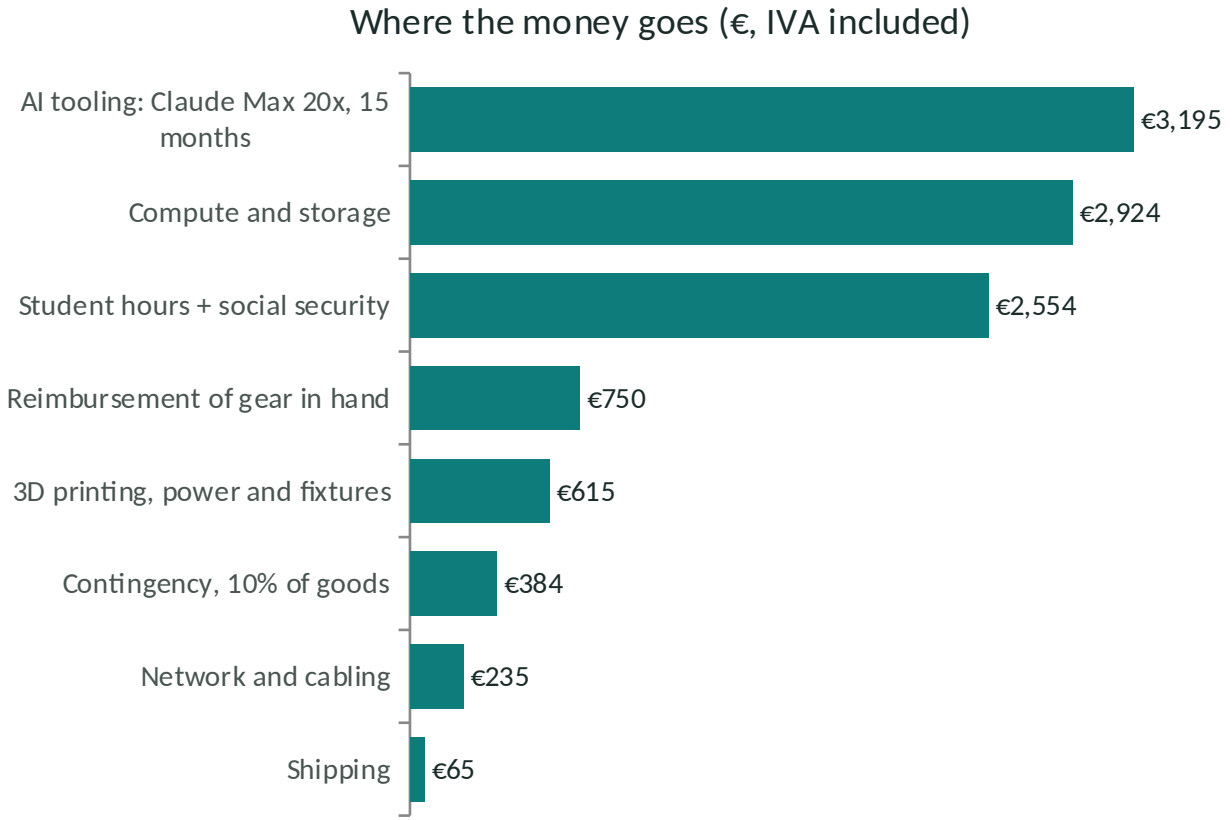

€4,641.60

Private cloud hosts, battery UPS

Phase 3 · Apr–Dec 2027

€1,917.00

Claude Max 20x, 9 more months

Short answers for the room

Question	Short answer
Do I need experience?	No. The first labs start with plugging cables and reading logs.
Is hacking legal here?	Only inside this isolated lab, on our own systems, under written rules.
What jobs does this lead to?	SOC analyst, network or systems administrator, cloud and DevOps engineer.
Why not just use the cloud?	We use it too. Building your own shows you what the cloud hides.
Which certifications can I prepare for?	The platforms cover Red Hat, EC-Council (CEH, CHFI and more), SAS and Cisco tracks; ask which ones your programme includes.
How do I get involved?	Through lab projects in your courses, and paid student-assistant hours when they open.
